

28 January 2014

## Quarterly Activities Report December 2013 - Amended

- **Drilling at Nordgruva Copper Zinc identifies significant off hole anomalies**
- **Espedalen Inferred Resource of ~9Mt grading 0.37% nickel announced**
- **Independent review described Granmuren region as global nickel camp**

### **Overview**

Diamond drilling at the Nordgruva copper zinc project concluded early in the quarter with down hole EM identifying a strong conductor ~50m off hole that might represent massive sulphides. An independent review of historical data at the Espedalen nickel/copper deposit generated an Inferred Resource of 8.95Mt grading 0.37% nickel and 0.16% copper. Drake commissioned an independent review of the Bergslagen region which includes Drake's Granmuren nickel prospect. The independent review described a number of prospective targets and described the region as having potential to be a world class nickel camp.

### **Operations**

Drake has a portfolio of assets across nickel, copper and gold in the Nordic region and West Africa. Progress was made during the quarter at Nordgruva (Copper/Zinc), Espedalen (Nickel/copper) and Granmuren (Nickel/Copper). Negotiations to secure a highly prospective parcel adjacent to Drake's Seimana gold prospects in Guinea progressed significantly during the quarter and concluded early in the New Year.

### **Nordgruva**

Drake, with its joint venture partner in the Nordgruva project, Panoramic Resources Limited, completed a ~575m diamond hole (NKSD001) to investigate one of five exceptional conductors identified at Nordgruva from previous geophysics programs.

The down hole EM survey conducted at completion of drilling identified two significant, strong off-hole conductors at 400m and 450m. The stratigraphic position in or close to amphibolitic gabbro units, and conductor characteristics and strength, suggest the conductors could both represent massive sulphides of substantial thickness.

Assay results were announced in the New Year. Anomalous zinc results around 400 to 450m within amphibolites also correlate well with the location of the off-hole conductors and may represent a halo around more massive sulphide mineralisation within the conductor. This stratigraphic position is recognised as being one of three preferred mineralised horizons in

the Roros district. Follow up drilling to test the off-hole conductors is planned in the new calendar year.

Figure One: Nordgruva JV permit area contains historical mines and numerous targets generated from modern exploration techniques.

### Espedalen

Drake’s Espedalen portfolio in central Norway is a suite of licences that contains numerous nickel/copper targets. The targets range from geophysics anomalies or surface rock chip samples that have not been followed up, to targets that have had considerable drilling completed. Two advanced deposits are Dalen and Stormyra (figure 2). During the quarter Drake’s resource consultant estimated Inferred Resource for both deposits (table 1) to give a combined Inferred Resource of 8.96Mt grading 0.37% nickel and 0.16% copper.

Whilst there is potential for increased tonnages at both Dalen and Stormyra, Drake’s focus at Espedalen is to explore some of the many under-explored targets within the Espedalen portfolio.

Figure Two: Espedalen has a number of prospective sites

|  | Tonnes<br>(Mt)   | Grade       |             |             | Contained Metal |               |              |

Table One: Espedalen Mineral Resource. The information is extracted from the report entitled "Espedalen Nickel Copper Resource" created on 10/10/13 and is available to view on [www.drakeresources.com.au](http://www.drakeresources.com.au). The Company confirms that it is not aware of any information or data that materially affects the information included in the original market announcement and that all material assumptions and technical parameters underpinning the estimate in the relevant market announcement continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

## Granmuren

Drake's greenfield Granmuren nickel/copper sulphide discovery in Sweden generated considerable encouraging news throughout 2012 and the first half of 2013. Drake used the latter half of the year to complete modelling of the deposit and strategically assess its Bergslagen asset portfolio, which contains Granmuren. The model is not of sufficient robustness to reveal potential tonnages; however, it provides an indication of the potential for Granmuren to be a significant source of near surface mineralisation.

In addition, the Company engaged Mineralium Pty Ltd, specifically Dr Ben Grguric with his impressive track record in the identification of magmatic hosted base metal sulphide targets, to assess Drake's Bergslagen portfolio. Key findings of the report include –

- The inferred age of Granmuren mineralisation is within an episode of Earth's history in which many of the world's major nickel camps were formed (1.88 – 1.86 Ga)
- Many of Drake's permits are near, and occasionally on, local deep structures/terrane boundaries such as the Gävle-Rättvik deformation zone; nickel deposits tend to be associated with large, crustal scale structures
- There are abundant sulphur-bearing rocks in the regional supracrustal sequence, providing the conditions in which nickel/copper sulphides could concentrate and precipitate to form massive sulphide.
- Combining the above with demonstrated presence of nickel /copper occurrences across Drake's portfolio, all point to the area having the potential to contain a world class nickel camp.

Drake has a dominant land position in a potential world class nickel camp and next steps at Granmuren will likely include VTEM assessment of high priority targets identified in the report.

## Seimana

Negotiations to secure a highly prospective parcel adjacent to Drake's Seimana gold prospects in Guinea progressed significantly during the quarter and concluded early in the New Year. The option to purchase agreement covers a 236km<sup>2</sup> area adjacent to Drake's Seimana project which is under a similar option arrangement. See announcement 6/1/14 for agreement details.

The new area will form part of Drake's existing Seimana Project which has generated very encouraging results to date. In July 2012 Drake announced the results of a soil and termite mound sampling programme in which strong gold anomalies in soil were identified. The new area also abuts and is along strike from Avocet Mining's permits containing the 3M+ oz Tri-K gold deposits. Field mapping of the new area will commence in quarter one.

## The Plan Ahead

The immediate term will see on-ground activity at Joma copper/zinc and Seimana gold in Guinea during the first quarter. A second drill hole at Nordgruva targeting the off hole conductors identified from the first hole is likely to occur in the Northern summer as is the flying of VTEM over the numerous Granmuren/Bergslagen nickel targets in central Sweden.

**Competent Persons Statement**

*The information related to the Espedalen Resource is extracted from the report entitled “Espedalen Nickel Copper Resource” created on 10/10/13 and is available to view on [www.drakeresources.com.au](http://www.drakeresources.com.au). The Company confirms that it is not aware of any information or data that materially affects the information included in the original market announcement and that all material assumptions and technical parameters underpinning the estimate in the relevant market announcement continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person’s findings are presented have not been materially modified from the original market announcement.*

**Caution Regarding Forward Looking Information.**

*This document contains forward looking statements concerning Drake. Forward-looking statements are not statements of historical fact and actual events and results may differ materially from those described in the forward looking statements as a result of a variety of risks, uncertainties and other factors. Forward-looking statements are inherently subject to business, economic, competitive, political and social uncertainties and contingencies. Many factors could cause the Company’s actual results to differ materially from those expressed or implied in any forward-looking information provided by the Company, or on behalf of, the Company. Such factors include, among other things, risks relating to additional funding requirements, metal prices, exploration, development and operating risks, competition, production risks, regulatory restrictions, including environmental regulation and liability and potential title disputes. Forward looking statements in this document are based on Drake’s beliefs, opinions and estimates of Drake as of the dates the forward looking statements are made, and no obligation is assumed to update forward looking statements if these beliefs, opinions and estimates should change or to reflect other future developments*

## Compliance statement

- 1 This statement has been prepared under accounting policies which comply with accounting standards as defined in the Corporations Act or other standards acceptable to ASX (see note 5).
- 2 This statement does give a true and fair view of the matters disclosed.

Signed:

\_\_\_\_\_  
Director and Company Secretary

Dated: 30 January 2014

Print name: Jay Stephenson

## Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 Issued and quoted securities. The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, AASB 6: Exploration for and Evaluation of Mineral Resources and AASB 107: Statement of Cash Flows apply to this report.
- 5 Accounting Standards ASX will accept, for example, the use of International Financial Reporting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
